<p>The CDC provides a list of approved N-95 respirators to the public as a courtesy. With the use of other publicly available information, we have extracted an Aptar list of the masks known to be of polypropylene, polyester, or a combination of both materials. The masks used during Aptar regulatory, safety, and efficacy studies for N-95 Disinfection by Activ-Shield™ technology have included these compositions.</p>				
<p>The Aptar lists omits masks in which we were unable to confirm information concerning the trademarked materials used for production of those masks.</p>
